QUICK START ASSESSMENT

Justify your acquisition by understanding your data issues up front and quantifying the benefits in addressing them – in 2 weeks or less.

Quick Start is a **risk free assessment** of our Master Data Management or Identity Insight software on your data. Using our **zero footprint approach** we provide the hardware appliance, you provide the data extracts, and we do the rest. Our appliance can be run with or without a network connection on your premises to eliminate data security concerns. No data ever leaves your premises and we follow your security policies.

Data quality issues have a significant impact on your day to day operations. Different systems all hold similar data that spans the enterprise. Not having a single source of truth or a 360^0 view of this critical data (e.g. a Client) creates risk, client dissatisfaction, and lost revenue opportunities. Many organizations have never quantified these issues hoping they are fine. At IMT, we recognize that hope is not a strategy so tackling your data problems head on is your only option

to consolidate data for actionable intelligence and compliance. At IMT we understand that accurate identity resolution drives operational efficiencies in both the private and public sectors so let us help you understand the risks of doing nothing.

A typical IMT Quick Start engagement runs between 1 and 2 weeks and during this time you can justify your acquisition by understanding your data quality issues and quantifying the benefits to address these issues with our solution. During an IMT QuickStart assessment, our certified staff will load your data into a pre-configured IBM InfoSphere Master Data Management (MDM) or IBM InfoSphere Identity Insight instance and analyze the results to produce a comprehensive report that identifies and quantifies data quality issues across your enterprise.

KEY BENEFITS OF IMT QUICK START

Justify your acquisition by understanding your data and the benefits to addressing data integrity in your enterprise.

Improve your project planning and cost estimations by knowing your data issue hot spots before you start.

Accelerate your implementation by configuring your MDM or II software from the Quick Start engagement.

Gain the necessary insight into your enterprise data to establish a data governance and stewardship approach.

# IMT QUICKSTART METHODOLOGY

ZERO FOOTPRINT APPROACH

IMT provides a hardware appliance, you provide data extracts from your source systems and we do the rest. The appliance can be run with or without a network connection on your premises to eliminate data security concerns. No data ever leaves your premises and we follow your security policies.

ANALYTICS

Using IBM InfoSphere MDM tools with highly advanced data quality inspection methods combined with advanced probabilistic matching logic found in IBM's InfoSphere MDM and/or II software, we will link and match your data across all contributing sources to provide insights into your data that will allow you to make informed decisions.

REPORT

A comprehensive report is provided at the end of the 1–2 week engagement that identifies data quality issues across your enterprise and gives you deep insight into your data and the benefits to addressing the issues. And If you find you do wish to move forward, simply transfer what you have learned from the QuickStart directly into your implementation – saving you time and money.
